Continuation of Substance of Interview including description of the general nature of what was discussed: the Examiner indicated that amendment to positively recite that the nanoparticles within each pit consist of a single magnetic specie would appear to distinguish over Saito, since Saito requires a combination of hard and soft magnetic species. The Examiner noted that the requirement that the particles be "magnetic" was deemed to be critical and/or essential to the practice of the invention, since the disclosed invention is a "magnetic" recording medium. Applicants agreed to the proposed changes.
